Introduction

T & S Industries, Inc. manufactures all of our shell catchers in the U.S.A. and we have been in business since 1972. Our T&S Shell Catchers are made of high quality spring steel and/or super strength plastic. They snap on and off with no modification to the gun. Some of our models are all spring steel with a black Teflon type finish of TFE and others are super strength plastic and most have a spring steel insert molded into the catcher.

The T&S Shell Catcher One Year Limited Guarantee

Replacement of the merchandise of any defective merchandise within one year of date of purchase. Merchandise must be returned to T&S Industries, Inc., prepaid, and not modified along with dated proof of purchase.

NOTE: *Shell Catchers for other guns or gauges than those shown on this web site are **NOT** manufactured or available. If the **EXACT** gun model is not listed on this web site, we **DO NOT** make a T&S Shell Catcher for it.*

*It is simply **NOT** economically feasible for us to make a shell catcher for guns where **TRAP** and **SKEET** models are not manufactured - **NOT** enough demand for the investment it takes.*

Since we do not own one of every model shotgun made, we are not able to tell if any of our shell catchers can be modified for other guns or will fit other guns.

CONTACT: Please do not expect an Email response when asking if we have a shell catcher that will fit some other gun model not listed.

T&S Shell Catchers snap on and off with no modification to the gun. T&S Shell Catchers are available in three different types:

- Spring steel with TFE finish
- Super strength black plastic
- Super strength black plastic with steel insert

Our T&S Shell Catchers are used for catching single shells ONLY.

The loaded shell is placed in the gun for firing by placing the brass end first, into the ejection port just ahead of the T&S Shell Catcher. The brass is aligned to the rear so the loaded shell lies on the carrier inside the receiver. When the shooter is ready to shoot, he closes the bolt with the Action closing button and the carrier raises the shell while the bolt pushes the loaded shell into the firing chamber. After firing, the empty shell can easily be removed from the front end of the ejection port and placed into the shooters vest/pouch/shell bag, etc.
